

Protect what your firm knows.

Put it to work.

CavalryAI creates a private AI environment where attorneys and professionals can securely access the collective intelligence of their organization - while the organization maintains control over its data, models and AI architecture.

YOUR DATA IS YOUR DOMAIN.

AI should increase the value of that data - not require you to surrender control of it.

WHY CAVALRYAI

01 PROTECT THE FIRM'S DOMAIN Give attorneys an approved AI environment designed around the firm's security, privacy and governance requirements - reducing the pressure to use unmanaged tools with sensitive information.	02 UNLOCK INSTITUTIONAL INTELLIGENCE Make approved briefs, precedents, research, contracts, templates and other firm knowledge conversationally accessible, with source-grounded responses that can be verified.
03 CAPTURE & COMPOUND KNOWLEDGE Turn accumulated work product and expertise into reusable organizational intelligence instead of leaving valuable knowledge trapped in individual matters or individual attorneys.	04 IMPROVE PROFESSIONAL LEVERAGE Reduce time spent finding, organizing and summarizing information so professionals can spend more time on judgment, strategy, client service and higher-value work.

WHO WE ARE

CavalryAI is a team of seasoned professionals with decades of combined experience across software development, legal expertise, operations management, engineering, AI data orchestration and large-scale infrastructure deployments. We help organizations turn private data into a competitive advantage while preserving security, control and scalability.

Our mission: where privacy meets performance, and innovation meets security.

PRIVATE AI AS AN EXTENSION OF YOUR ENVIRONMENT

CavalryAI extends - rather than replaces - the controls your organization already relies on, creating a governed path to private knowledge, private models and approved external AI capabilities.

A governed path from authenticated users to private knowledge, private models and policy-controlled external AI.

START WITH A PRIVATE AI ASSESSMENT

We will work with your leadership and IT team to identify high-value workflows, map the data and security requirements, and outline what a Private AI architecture designed around your organization could look like.
